## 1 Concepts and effectiveness of the cover-coefficient-based clustering methodology for text databases

Fazli Can, Esen A. Ozkarahan

December 1990 **ACM Transactions on Database Systems (TODS)**, Volume 15 Issue 4

Full text available: [pdf\(2.74 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#), [review](#)

A new algorithm for document clustering is introduced. The base concept of the algorithm, the cover coefficient (CC) concept, provides a means of estimating the number of clusters within a document database and related indexing and clustering analytically. The CC concept is used also to identify the cluster seeds and to form clusters with these seeds. It is shown that the complexity of the clustering process is very low. The retrieval experiments show that the information-retrieval effectiv ...

**Keywords:** cluster validity, clustering-indexing relationships, cover coefficient, decoupling coefficient, document retrieval, retrieval effectiveness

## 2 Intrusion detection and response: An empirical analysis of NATE: Network Analysis of Anomalous Traffic Events

Carol Taylor, Jim Alves-Foss

September 2002 **Proceedings of the 2002 workshop on New security paradigms**

Full text available: [pdf\(899.25 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#)

This paper presents results of an empirical analysis of NATE (Network Analysis of Anomalous Traffic Events), a lightweight, anomaly based intrusion detection tool. Previous work was based on the simulated Lincoln Labs data set. Here, we show that NATE can operate under the constraints of real data inconsistencies. In addition, new TCP sampling and distance methods are presented. Differences between real and simulated data are discussed in the course of the analysis.

**Keywords:** intrusion detection, statistics, traffic analysis

## 3 Modelling the Internet: On characterizing affinity and its impact on network performance

Gabriel Lucas, Abhishek Ghose, John Chuang

August 2003 **Proceedings of the ACM SIGCOMM workshop on Models, methods and tools for reproducible network research**

Full text available: [pdf\(236.10 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#)

An important component of simulation-based network research is the selection of nodes to a member group, such as receivers in a multicast group or web clients in a content delivery network. In a seminal paper, Philips et al. introduce an algorithm for generating member groups with different degrees of affinity (clusteredness) and show that affinity can have a significant effect on multicast efficiency. Subsequent studies applying this algorithm have all used the algorithm's input parameter ...

**4 DATAPLOT—an interactive high-level language for graphics, non-linear fitting, data analysis, and mathematics**

James J. Filliben

August 1981 **Proceedings of the 8th annual conference on Computer graphics and interactive techniques**

Full text available: [pdf\(1.16 MB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

This paper describes the design philosophy and features of DATAPLOT—a high-level (free-format English-like syntax) language for: 1) graphics (continuous or discrete); 2) fitting (linear or non-linear); 3) general data analysis; 4) mathematics. DATAPLOT was developed originally in 1977 in response to data analysis problems encountered ...

**Keywords:** Computer graphics, Data analysis, Diagrams, Fitting, Graphics languages, High-level languages, Interactive computing, Mathematical modeling, Mathematics, Modeling, Portability, Schematics, Software, Statistics

**5 Statistics and data mining: intersecting disciplines**

David J. Hand

June 1999 **ACM SIGKDD Explorations Newsletter**, Volume 1 Issue 1

Full text available: [pdf\(487.82 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#)

Statistics and data mining have much in common, but they also have differences. The nature of the two disciplines is examined, with emphasis on their similarities and differences.

**Keywords:** knowledge discovery, statistics

**6 Partition testing, stratified sampling, and cluster analysis**

Andy Podgurski, Charles Yang

December 1993 **ACM SIGSOFT Software Engineering Notes , Proceedings of the 1st ACM SIGSOFT symposium on Foundations of software engineering**, Volume 18 Issue 5

Full text available: [pdf\(1.35 MB\)](#) Additional Information: [full citation](#), [references](#), [citations](#), [index terms](#)

**7 Contributed articles: Genetic subtyping using cluster analysis**

Tom Burr, James R. Gattiker, Greggory S. LaBerge

July 2001 **ACM SIGKDD Explorations Newsletter**, Volume 3 Issue 1

Full text available: [pdf\(984.40 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#)

In this paper we (1) describe state-of-the-art methods to identify clusters in DNA sequence data for taxonomic analysis; (2) describe a new method with better scaling properties based on model-based clustering, and (3) present examples using the nucleoprotein and

hemagglutin regions of influenza and the *env* and *gag* regions of human immunodeficiency virus (HIV).

**Keywords:** DNA sequence analysis, HIV, influenza, model-based clustering, phylogenetic trees

**8** Data clustering: a review

A. K. Jain, M. N. Murty, P. J. Flynn

September 1999 **ACM Computing Surveys (CSUR)**, Volume 31 Issue 3

Full text available:  pdf(636.24 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#), [review](#)

Clustering is the unsupervised classification of patterns (observations, data items, or feature vectors) into groups (clusters). The clustering problem has been addressed in many contexts and by researchers in many disciplines; this reflects its broad appeal and usefulness as one of the steps in exploratory data analysis. However, clustering is a difficult problem combinatorially, and differences in assumptions and contexts in different communities has made the transfer of useful generic co ...

**Keywords:** cluster analysis, clustering applications, exploratory data analysis, incremental clustering, similarity indices, unsupervised learning

**9** Multiple molecular dynamics simulations of a 28mer oligopeptide reveal enhanced sampling of conformational space

Sangeeta Sawant, A. S. Kolaskar

January 2003 **Proceedings of the First Asia-Pacific bioinformatics conference on Bioinformatics 2003 - Volume 19**

Full text available:  pdf(1.53 MB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

A strategy using multiple runs of MD simulations has been used for conformational searches of 28-mer peptide PSV which demonstrate the effectiveness of the strategy to sample the conformational space more efficiently than the single, long MD simulation. Further, the use of cluster analysis and Ca distances has been made to detect native like folds of the peptide that are generated in the relatively short time scale simulations.

**Keywords:** cluster analysis, conformational searches, multiple MD simulations, oligopeptide

**10** A general probabilistic framework for clustering individuals and objects

Igor V. Cadez, Scott Gaffney, Padhraic Smyth

August 2000 **Proceedings of the sixth ACM SIGKDD international conference on Knowledge discovery and data mining**

Full text available:  pdf(214.48 KB) Additional Information: [full citation](#), [references](#), [citations](#), [index terms](#)

**Keywords:** EM algorithm, clustering, mixture models

**11** An optimal repartitioning decision policy

David M. Nicol, Paul F. Reynolds

December 1985 **Proceedings of the 17th conference on Winter simulation**

Full text available:  pdf(632.09 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#)

The automated partitioning of simulations for parallel execution is a timely research problem. A simulation's run-time performance depends heavily on the nature of the inputs the simulation responds to. Consequently, a simulation's run-time behavior varies as a function of time. Since a simulation's run-time behavior is generally too complex to analytically predict, partitioning algorithms must be statistically based: they base their partitioning decisions on the simulation ...

## **12 Rhythmic-motion synthesis based on motion-beat analysis**

Tae-hoon Kim, Sang Il Park, Sung Yong Shin

July 2003 **ACM Transactions on Graphics (TOG)**, Volume 22 Issue 3

Full text available:  [pdf\(6.29 MB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Real-time animation of human-like characters is an active research area in computer graphics. The conventional approaches have, however, hardly dealt with the rhythmic patterns of motions, which are essential in handling rhythmic motions such as dancing and locomotive motions. In this paper, we present a novel scheme for synthesizing a new motion from unlabelled example motions while preserving their rhythmic pattern. Our scheme first captures the motion beats from the example motions to extract ...

**Keywords:** beat analysis, motion blending, motion signal processing, motion synchronization, motion synthesis, motion transition

## **13 A reliability model combining representative and directed testing**

Brian Mitchell, Steven J. Zeil

May 1996 **Proceedings of the 18th international conference on Software engineering**

Full text available:  [pdf\(929.88 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)  
 [Publisher Site](#)

Directed testing methods, such as functional or structural testing, have been criticized for a lack of quantifiable results. Representative testing permits reliability modeling, which provides the desired quantification. Over time, however, representative testing becomes inherently less effective as a means of improving the actual quality of the software under test. A model is presented which permits representative and directed testing to be used in conjunction. Representative testing can be used ...

**Keywords:** directed testing, failure rates, fault detection, fault revelation, functional testing, interfailure time, order statistics, post-mortem debugged fault analysis, program debugging, program diagnostics, program testing, quantification, random processes, random variable, reliability estimate updating, reliability model, representative testing, software quality, software reliability, statistics, structural testing

## **14 Variational learning of clusters of undercomplete nonsymmetric independent components**

Kwokleung Chan, Te-Won Lee, Terrence J. Sejnowski

March 2003 **The Journal of Machine Learning Research**, Volume 3

Full text available:  [pdf\(345.39 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

We apply a variational method to automatically determine the number of mixtures of independent components in high-dimensional datasets, in which the sources may be nonsymmetrically distributed. The data are modeled by clusters where each cluster is described as a linear mixture of independent factors. The variational Bayesian method yields an accurate density model for the observed data without overfitting problems. This allows the dimensionality of the data to be identified for each cluster. Th ...

**Keywords:** Bayesian learning, ICA, density estimations, mixture models

**15 Pursuing failure: the distribution of program failures in a profile space**

William Dickinson, David Leon, Andy Podgurski

September 2001 **ACM SIGSOFT Software Engineering Notes , Proceedings of the 8th European software engineering conference held jointly with 9th ACM SIGSOFT international symposium on Foundations of software engineering**, Volume 26 Issue 5

Full text available: [!\[\]\(0678d1887db22e3f6b52fe38cd7e7b5b\_img.jpg\) pdf\(304.58 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Observation-based testing calls for analyzing profiles of executions induced by potential test cases, in order to select a subset of executions to be checked for conformance to requirements. A family of techniques for selecting such a subset is evaluated experimentally. These techniques employ automatic cluster analysis to partition executions, and they use various sampling techniques to select executions from clusters. The experimental results support the hypothesis that with appropriate profil ...

**16 Tests for gene clustering**

Dannie Durand, David Sankoff

April 2002 **Proceedings of the sixth annual international conference on Computational biology**

Full text available: [!\[\]\(da54fa747b6713d79175de3c1d218b58\_img.jpg\) pdf\(2.14 MB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Comparing chromosomal gene order in two or more related species is an important approach to studying the forces that guide genome organization and evolution. Linked clusters of similar genes found in related genomes are often used to support arguments of evolutionary relatedness or functional selection. However, as the gene order and the gene complement of sister genomes diverge progressively due to large scale rearrangements, horizontal gene transfer, gene duplication and gene loss, it becomes ...

**17 An approach to detecting changes in the factors affecting the performance of computer systems**

Robert Berry, Joseph Hellerstein

April 1991 **ACM SIGMETRICS Performance Evaluation Review , Proceedings of the 1991 ACM SIGMETRICS conference on Measurement and modeling of computer systems**, Volume 19 Issue 1

Full text available: [!\[\]\(9fb35ce00785e0d1c8f42da5044e6593\_img.jpg\) pdf\(1.19 MB\)](#) Additional Information: [full citation](#), [references](#), [index terms](#)

**18 Inferring domain-domain interactions from protein-protein interactions**

Minghua Deng, Shipra Mehta, Fengzhu Sun, Ting Chen

April 2002 **Proceedings of the sixth annual international conference on Computational biology**

Full text available: [!\[\]\(e7333b044f927d371647bc5699c46b55\_img.jpg\) pdf\(1.95 MB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Protein-protein interactions are important events in cellular and biochemical processes within a cell. Several researchers have undertaken the task of analyzing protein-protein interactions covering all genes of an organism by using yeast two-hybrid assays. Protein-protein interactions involve physical interactions between protein domains. Therefore,

understanding protein interactions at the domain level gives a global view of the protein interaction network, and possibly extends functions of pr ...

**19 Self-adaptive, on-line reclustering of complex object data**

William J. McIver, Roger King

May 1994 **ACM SIGMOD Record , Proceedings of the 1994 ACM SIGMOD international conference on Management of data**, Volume 23 Issue 2

Full text available:  pdf(1.19 MB)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

A likely trend in the development of future CAD, CASE and office information systems will be the use of object-oriented database systems to manage their internal data stores. The entities that these applications will retrieve, such as electronic parts and their connections or customer service records, are typically large complex objects composed of many interconnected heterogeneous objects, not thousands of tuples. These applications may exhibit widely shifting usage patterns due to their i ...

**20 A bayesian approach to transcript estimation from gene array data: the BEAM technique**

Ron O. Dror, Jonathan G. Murnick, Nicola A. Rinaldi, Voichita D. Marinescu, Ryan M. Rifkin, Richard A. Young

April 2002 **Proceedings of the sixth annual international conference on Computational biology**

Full text available:  pdf(1.84 MB)

Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

We present a new statistically optimal approach to estimate transcript levels and ratios from one or more gene array experiments. The Bayesian Estimation of Array Measurements (BEAM) technique uses a model of measurement noise and prior information to estimate biological expression levels. It provides a principled method to deal with negative expression level measurements, combine multiple measurements, and identify changes in expression level. BEAM is more flexible than existing techniques, bec ...

## 1 [A survey of Web metrics](#)

Devanshu Dhyani, Wee Keong Ng, Sourav S. Bhowmick

December 2002 **ACM Computing Surveys (CSUR)**, Volume 34 Issue 4

Full text available:  [pdf\(289.28 KB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

The unabated growth and increasing significance of the World Wide Web has resulted in a flurry of research activity to improve its capacity for serving information more effectively. But at the heart of these efforts lie implicit assumptions about "quality" and "usefulness" of Web resources and services. This observation points towards measurements and models that quantify various attributes of web sites. The science of measuring all aspects of information, especially its storage and retrieval or ...

## 2 [Fast detection of communication patterns in distributed executions](#)

Thomas Kunz, Michiel F. H. Seuren

November 1997 **Proceedings of the 1997 conference of the Centre for Advanced Studies on Collaborative research**

Full text available:  [pdf\(4.21 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Understanding distributed applications is a tedious and difficult task. Visualizations based on process-time diagrams are often used to obtain a better understanding of the execution of the application. The visualization tool we use is Poet, an event tracer developed at the University of Waterloo. However, these diagrams are often very complex and do not provide the user with the desired overview of the application. In our experience, such tools display repeated occurrences of non-trivial commun ...

#### 4 Analyzing stability in wide-area network performance

Hari Balakrishnan, Mark Stemm, Srinivasan Seshan, Randy H. Katz

June 1997 **ACM SIGMETRICS Performance Evaluation Review , Proceedings of the 1997 ACM SIGMETRICS international conference on Measurement and modeling of computer systems**, Volume 25 Issue 1

Full text available: [pdf\(1.76 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

The Internet is a very large scale, complex, dynamical system that is hard to model and analyze. In this paper, we develop and analyze statistical models for the observed end-to-end network performance based on extensive packet-level traces (consisting of approximately 1.5 billion packets) collected from the primary Web site for the Atlanta Summer Olympic Games in 1996. We find that observed mean throughputs for these transfers measured over 60 million complete connections vary widely as a function ...

#### 5 On the scale and performance of cooperative Web proxy caching

Alec Wolman, M. Voelker, Nitin Sharma, Neal Cardwell, Anna Karlin, Henry M. Levy

December 1999 **ACM SIGOPS Operating Systems Review , Proceedings of the seventeenth ACM symposium on Operating systems principles**, Volume 33 Issue 5

Full text available: [pdf\(1.87 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

While algorithms for cooperative proxy caching have been widely studied, little is understood about cooperative-caching performance in the large-scale World Wide Web environment. This paper uses both trace-based analysis and analytic modelling to show the potential advantages and drawbacks of inter-proxy cooperation. With our traces, we evaluate quantitatively the performance-improvement potential of cooperation between 200 small-organization proxies within a university environment, and between ...

#### 6 Special issue on Machine learning methods for text and images: Matching words and pictures

Kobus Barnard, Pinar Duygulu, David Forsyth, Nando de Freitas, David M. Blei, Michael I. Jordan

March 2003 **The Journal of Machine Learning Research**, Volume 3

Full text available: [pdf\(789.04 KB\)](#)

Additional Information: [full citation](#), [abstract](#)

We present a new approach for modeling multi-modal data sets, focusing on the specific case of segmented images with associated text. Learning the joint distribution of image regions and words has many applications. We consider in detail predicting words associated with whole images (auto-annotation) and corresponding to particular image regions (region naming). Auto-annotation might help organize and access large collections of images. Region naming is a model of object recognition as a process ...

#### 7 Collaborative Web caching based on proxy affinities

Jiong Yang, Wei Wang, Richard Muntz

June 2000 **ACM SIGMETRICS Performance Evaluation Review , Proceedings of the 2000 ACM SIGMETRICS international conference on Measurement and modeling of computer systems**, Volume 28 Issue 1

Full text available: [pdf\(1.10 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

With the exponential growth of hosts and traffic workloads on the Internet, collaborative web caching has been recognized as an efficient solution to alleviate web page server bottlenecks and reduce traffic. However, cache discovery, i.e., locating where a page is cached, is a challenging problem, especially in the fast growing World Wide Web environment, where the number of participating proxies can be very large. In this paper, we propose a new scheme which employs proxy affinities to map ...

**8 The state of the art in locally distributed Web-server systems**

Valeria Cardellini, Emiliano Casalicchio, Michele Colajanni, Philip S. Yu

June 2002 **ACM Computing Surveys (CSUR)**, Volume 34 Issue 2Full text available:  pdf(1.41 MB)Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

The overall increase in traffic on the World Wide Web is augmenting user-perceived response times from popular Web sites, especially in conjunction with special events. System platforms that do not replicate information content cannot provide the needed scalability to handle large traffic volumes and to match rapid and dramatic changes in the number of clients. The need to improve the performance of Web-based services has produced a variety of novel content delivery architectures. This article w ...

Efficient clustering algorithms play a very important role in the fast connection establishment of ad hoc networks. In this paper, we describe a communication model that is derived directly from that of Bluetooth, an emerging technology for pervasive computing; this technology is expected to play a major role in future personal area network applications. We further propose two new distributed algorithms for clustering in wireless ad hoc networks. The existing algorithms often become infeasible ...

**13 The content and access dynamics of a busy Web site: findings and implications**

Venkata N. Padmanabhan, Lili Qiu

August 2000 **ACM SIGCOMM Computer Communication Review , Proceedings of the conference on Applications, Technologies, Architectures, and Protocols for Computer Communication**, Volume 30 Issue 4

Full text available: [pdf\(820.58 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

In this paper, we study the dynamics of the MSNBC news site, one of the busiest Web sites in the Internet today. Unlike many other efforts that have analyzed client accesses as seen by proxies, we focus on the server end. We analyze the dynamics of both the server content and client accesses made to the server. The former considers the content creation and modification process while the latter considers page popularity and locality in client accesses. Some of our key results are: (a) files ...

**14 Session 10D: management of computation: Self-organized autonomous web proxies**

Markus J. Kaiser, Kwok Ching Tsui, Jiming Liu

July 2002 **Proceedings of the first international joint conference on Autonomous agents and multiagent systems: part 3**

Full text available: [pdf\(316.41 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

With the increasing size of the Internet, proxy servers have emerged as a feasible way to reduce the overall network load and latency. More recently researchers focused on new ways to combine multiple cooperative proxies into one transparent proxy system to further increase the overall performance gain but no work so far was really able to propose an ideal trade-off between content dissemination and clustering in a changing environment caching environment. This paper introduces a self-organizing ...

**Keywords:** data clustering, load balancing, proxy, self-organization

**16 Process migration**

September 2000 **ACM Computing Surveys (CSUR)**, Volume 32 Issue 3

Full text available: [pdf\(1.24 MB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#), [review](#)

Process migration is the act of transferring a process between two machines. It enables dynamic load distribution, fault resilience, eased system administration, and data access locality. Despite these goals and ongoing research efforts, migration has not achieved widespread use. With the increasing deployment of distributed systems in general, and distributed operating systems in particular, process migration is again receiving more attention in both research and product development. As highlighted in this ...

During the past years, several attempts have been made to develop functionality for mobility management support and QoS provision in the realm of the IP networks. Since IP was not designed to support such functionality, new protocols have been specified and implemented to tackle these issues

Mobile IP is currently the dominant protocol that allows users to retain connectivity while roaming in I networks. RSVP (Resource reSerVation Protocol) is a well established protocol for reserving network ..

As part of the process of delivering content, devices like proxies and gateways log valuable information about the activities and navigation patterns of users on the Web. In this study, we consider how this navigation data can be used to improve Web search. A query posted to a search engine together with the set of pages accessed during a search task is known as a *search session*. We develop a mixture model for the observed set of search sessions, and propose variants of the classical EM a ...

In this paper, we examine the potential benefits of web proxy caches in improving the effective capacity of servers and networks. Since networks and servers are typically provisioned based on a high percentile of the load, we focus on the effects of proxy caching on the tail of the load distribution. We find that, unlike their substantial impact on the average load, proxies have a diminished impact on the tail of the load distribution. The exact reduction in the tail and the corresponding ...
